## Cattle Drive Maze

Help guide this cow through the barbed wire fence and out into the open range.

### Did You Know...?

Some historians have dated the end of the Old West era of American history to the invention of barbed wire – the first wire fencing material capable of restraining cattle. Barbed wire dramatically reduced the cost of enclosing large areas of land. The proliferation of barbed wire fences in the late 19th century led to “range wars” between farmers and free-range ranchers.
